Network Monitoring for Uninterrupted Business Continuity

As organizations grow and adapt to the ever-changing challenges, their networks must provide robust connectivity and impregnable security while adapting dynamically to unforeseen situations. Imagine a banking organization facing just a one-minute outage during critical business hours. Even a short moment of downtime could result in a loss of revenue and trust, harming the organization's reputation. Every global enterprise should ensure that its networks function without any interruptions. Monitoring networks with an AI-powered tool should be on your agenda to jump-start modernization in your organization's IT, improve security, and enhance confidence with your partners and customers.

As a solution, Site24x7 provides a **SaaS-based network performance monitoring and diagnostics tool** that lets you discover, monitor, and manage any device in your network from a single dashboard. It seamlessly merges digital capabilities that cater to today's complex networks. Site24x7's cloud-based solution empowers IT teams with its across-the-board capabilities that easily troubleshoot problems within your networks. Site24x7 provides **proactive network analysis and fault detection** with a secure, firewall-friendly architecture. This comprehensive resource also helps you track traffic **(NetFlow Analyzer)**, manage device configurations **(Network Configuration Manager)**, and monitor cloud-managed devices **(Cisco Meraki monitoring)** within its network monitoring suite.

1M	**2M**	**60K**	**250K**	**200B**
device configurations backed up	network performance counters tracked	configuration changes detected automatically	network interfaces monitored	NetFlow processed in a year

" *wanted to give a shout-out to Site24x7; we love them; they are great. We've got clients who need to access information in the UK, the US, anywhere in North America, Asia, or Europe. We've got points that we can leverage from Site24x7, and we can test latency between countries and continents, and it's just great. We love those guys. Great service, great support, and I wouldn't look anywhere else..*
—Shmuel Eliwatt, President, Zahava Networks

All-encompassing features for today's enterprises

Network Monitoring

Network Traffic Monitoring (NetFlow)

Network Configuration Management (NCM)

Cisco Meraki Monitoring
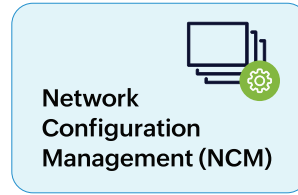

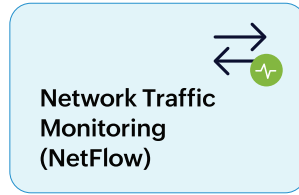

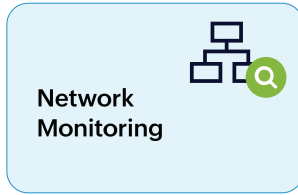

Network Performance and Availability Monitoring

Here's what we provide to make network monitoring simple—even in complex networks:

- Complete visibility into your networks with **deep insights at the device level and interface level.**
- Automatic discovery for over **11,000 device types** with SNMP support.
- Visualizations of the network hierarchy and connections using **topology and Layer 2 maps**.
- Instant processing of **SNMP traps** for notifications about any device that needs attention.

NetFlow Analyzer

Discover bandwidth hogs, fix them, and enhance your network performance using Site24x7's network bandwidth monitoring software.
Site24x7's NetFlow Analyzer:

- **Tracks all kinds of traffic flows** in your network and alerts you if there's any unusual activity.
- Analyzes flows based on technologies like **NetFlow, J-Flow, sFlow, IPFIX, NetStream, AppFlow, and CFlow**.
- Provides **detailed stats and reports** that you can use to fix issues quickly.

Network Configuration Manager

Site24x7 Network Configuration Manager tool automatically detects and makes backups of all network configuration changes.
All you have to do is restore an approved backup from the tool if there's an unauthorized or unexpected configuration change.
Your devices will start functioning optimally in no time.

Cisco Meraki Monitoring

Monitor your Cisco Meraki cloud controller to flag speed breakers and immediately get alerted about device downtime.
Track the status, availability, health, and performance of devices using SNMP or REST APIs as required. You can also monitor the response times and packet loss of your security appliances, configure thresholds, and receive alerts.

Why choose Site24x7 for monitoring your networks?

Single console monitoring

A single-tool to monitor all aspects of your network without any silos.

Complete visibility

Unvarying state of visibility into your network at all hours of the day that lets admins focus on cognitive tasks that require human intelligence.

Out-of-the-box reports

Intuitive dashboards and reports that provides comprehensive data for your analysis.

Third-party integrations

Integrate with software like Slack, Microsoft Teams, ServiceNow, PagerDuty and more to receive alerts.

Versatile alerting

Receive alert notifications via SMS messages, emails, voice calls, and push notifications.

Mobile app

Monitor your network resources on the go with Site24x7's Android and iOS apps.
